## Paper 1

Tuesday 12 May 2020
Time allowed: 1 hour 30 minutes

## Materials

For this paper you must have:

- a pencil and a ruler
- a scientific calculator
- a Data and Formulae Booklet.

## Instructions

- Use black ink or black ball-point pen.
- Fill in the boxes at the top of this page.
- Answer all questions.
- You must answer the questions in the spaces provided. Do not write outside the box around each page or on blank pages.
- If you need extra space for your answer(s), use the lined pages at the end of

- Do all rough work in this book. Cross through any work you do not want to be marked.
- Show all your working.

## Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 70 .
- You are expected to use a scientific calculator where appropriate.
- A Data and Formulae Booklet is provided as a loose insert.

Answer all questions in the spaces provided.

Figure 1

| $\mathbf{0}$ | $\mathbf{2}$ | $\mathbf{1}$ Figure 1 shows the spacecraft of total mass 610 kg entering the atmosphere at a |
| :--- | :--- | :--- | speed of $5.5 \mathrm{~km} \mathrm{~s}^{-1}$.

Calculate the kinetic energy of the spacecraft as it enters the atmosphere. Give your answer to an appropriate number of significant figures.

| $\mathbf{0}$ | $\mathbf{2} .2$ | A parachute opens during the spacecraft's descent through the atmosphere. |
| :--- | :--- | :--- |

Figure 2 shows the parachute-spacecraft system, with the open parachute displacing the atmospheric gas. This causes the system to decelerate.

Figure 2

Explain, with reference to Newton's laws of motion, why displacing the atmospheric gas causes a force on the system and why this force causes the system to decelerate.
