Pearson Edexcel International Advanced Level	re Number Candidate Number
<b>Monday 12 Nov</b>	ember 2018
Morning (Time: 1 hour 20 minutes)	Paper Reference WPH06/01
Physics Advanced Unit 6: Experimental Physic	:s
You must have: Ruler	Total Marks

## **Instructions**

- Use black ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided
  - there may be more space than you need.

### Information

- The total mark for this paper is 40.
- The marks for **each** question are shown in brackets
  - use this as a guide as to how much time to spend on each question.
- The list of data, formulae and relationships is printed at the end of this booklet.
- Candidates may use a scientific calculator.

### **Advice**

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.

Turn over ▶

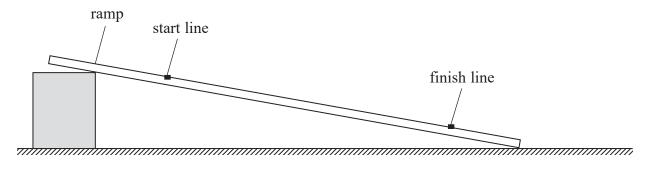

# Answer ALL questions in the spaces provided.

1 A student determined a value for the acceleration of free fall g, using the apparatus shown.

He placed a marble on the start line and used a stopwatch to measure the time *t* the marble took to roll to the finish line.

He obtained the following data.

t/s 2.37 2.33 2.36 2.29 2.32	
------------------------------	--

(a) (i) Calculate the mean value for t.

(1)

(ii) Calculate the percentage uncertainty in t.

**(2)** 

Percentage uncertainty in t =

(b) (i)	The student measured the vertical heights of the start line and finish line from bench. He used a metre rule and a set square each time.	the
	He recorded the change in height $\Delta h$ as $3.4  \mathrm{cm} \pm 0.2  \mathrm{cm}$ .	
	Explain why the uncertainty is stated as $\pm 0.2$ cm.	
		(2)
(ii)	t is given by the equation	
	$14 \mathrm{s}^2$	
	$t^2 = \frac{14s^2}{5g\Delta h}$	
	where $s$ is the distance travelled by the marble.	
	Calculate a value for <i>g</i> .	
	$s = 0.800 \mathrm{m} \pm 0.001 \mathrm{m}$	(1)
		(1)
	a =	
(:::)		
(111)	Calculate the percentage uncertainty in the value for $g$ .	(3)
	Percentage uncertainty in $g =$	

(iv) Comment on the value of g determined in this experiment.	(2)
(a) The student suggested modifying the symposiment to use a set of light setes to massy	
(c) The student suggested modifying the experiment to use a set of light gates to measure the time the marble took to roll to the finish line.	ure
	(2)
the time the marble took to roll to the finish line.	
the time the marble took to roll to the finish line.	
the time the marble took to roll to the finish line.

2	A student is investigating the absorption of gamma radiation by lead.	
	She has been provided with the following apparatus:	
	<ul> <li>laboratory source of gamma radiation,</li> <li>Geiger-Müller tube and counter,</li> <li>16 lead sheets each of approximately 1 mm thickness,</li> <li>stopwatch.</li> </ul>	
	(a) Explain the measuring instrument the student should use to measure the thickness of	
	each lead sheet.	(2)
	(b) State any variables the student should control.	(1)
	(c) Describe how the student should make sure that the recorded count rate is accurate.	(2)
	(c) Describe how the student should make sure that the recorded count rate is accurate.	(2)
	(c) Describe how the student should make sure that the recorded count rate is accurate.	(2)

	(Total for Question $2 = 6$ man	·ks)
		(-)
		(1)
(d) State one safety precaution the student should take who	en using a radioactive source.	

3 A student measured the energy W stored in a capacitor of unknown capacitance C.

He charged the capacitor using a power supply of potential difference V, then discharged the capacitor through a joulemeter.

He repeated the experiment twice more and recorded the following results.

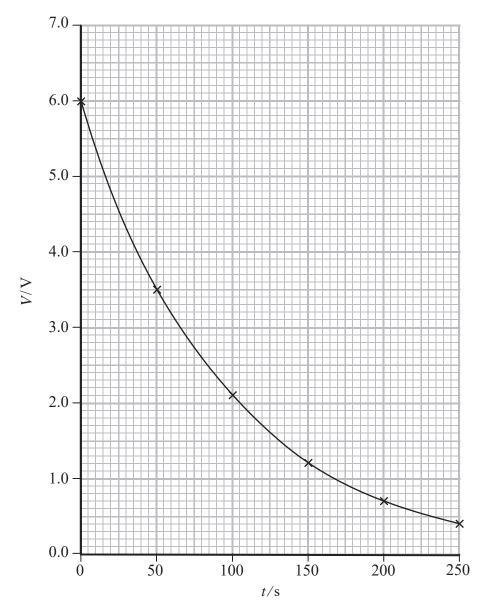

<i>V</i> / V	W/mJ
6.0	8.47
4.5	4.76
3.0	2.11

(a) Show that these results are consistent with the equation

$$W = \frac{1}{2}CV^2$$

(3)

(b) The same capacitor was charged to a potential difference of  $6.0\,\mathrm{V}$  and then discharged through an analogue voltmeter. The student recorded the potential difference V every  $50\,\mathrm{s}$  and plotted the graph shown.

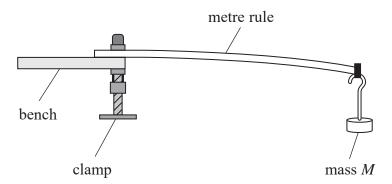

(i)	State the s	significance	of the	time	constant	for	the	discharge	of a	capacitor.	
-----	-------------	--------------	--------	------	----------	-----	-----	-----------	------	------------	--

(1)

(i	ii) Determine a value for the resistance R of the voltmeter.	
		(2)
		<i>R</i> =
	(Total for Que	estion 3 = 6 marks)

A student investigated the vertical oscillations of a mass *M* attached to the end of a wooden metre rule, using the arrangement shown.

(a) The student wrote the following plan.

To measure the oscillations:

- Place a marker at the equilibrium position.
- Time at least 10 oscillations and divide by the number of oscillations.

• Repeat the measurement and calculate a mean.

Explain how this method would ensure that the time period T is as accurate as possib	le.
	(3)

(b) The time period T is related to the mass M by the equation

$$T = qM^r$$

where q and r are constants.

Explain why plotting  $\log T$  against  $\log M$  should produce a straight line graph.

**(2)** 

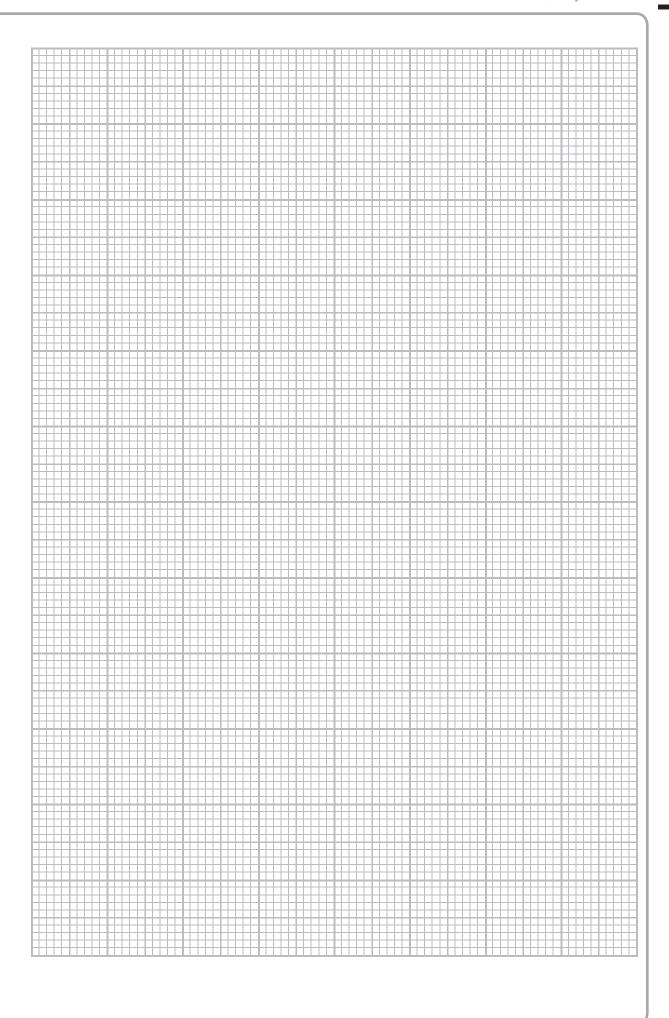

(c) The student recorded the following data.

<i>M</i> / kg	T / s
0.300	0.416
0.400	0.475
0.500	0.526
0.600	0.570
0.700	0.618
0.800	0.664

(i) Plot a graph of  $\log T$  against  $\log M$  on the grid opposite. Use the additional columns to record your processed data.

(6)

(ii) Determine the constants $q$ and $r$ and hence state the mathematical relationship between $T$ and $M$ .	
	(4)
(Total for Question 4 = 15 marks)	

**TOTAL FOR PAPER = 40 MARKS**

## List of data, formulae and relationships

 $g = 9.81 \text{ m s}^{-2}$ Acceleration of free fall (close to Earth's surface)

Boltzmann constant  $k = 1.38 \times 10^{-23} \text{ J K}^{-1}$ 

Coulomb's law constant  $k = 1/4\pi\varepsilon_0$ 

 $= 8.99 \times 10^9 \text{ N m}^2 \text{ C}^{-2}$ 

 $e = -1.60 \times 10^{-19} \,\mathrm{C}$ Electron charge

 $m_a = 9.11 \times 10^{-31} \text{kg}$ Electron mass

 $1 \text{ eV} = 1.60 \times 10^{-19} \text{ J}$ Electronvolt

 $G = 6.67 \times 10^{-11} \text{ N m}^2 \text{ kg}^{-2}$ Gravitational constant

Gravitational field strength  $g = 9.81 \text{ N kg}^{-1}$ (close to Earth's surface)

Permittivity of free space  $\varepsilon_0 = 8.85 \times 10^{-12} \text{ F m}^{-1}$ 

 $h = 6.63 \times 10^{-34} \,\mathrm{J s}$ Planck constant

Proton mass  $m_p = 1.67 \times 10^{-27} \text{ kg}$ 

 $c = 3.00 \times 10^8 \,\mathrm{m \ s^{-1}}$ Speed of light in a vacuum

 $\sigma = 5.67 \times 10^{-8} \; W \; m^{-2} \; K^{-4}$ Stefan-Boltzmann constant

 $u = 1.66 \times 10^{-27} \text{ kg}$ Unified atomic mass unit

#### Unit 1

#### **Mechanics**

Kinematic equations of motion v = u + at

> $s = ut + \frac{1}{2}at^2$  $v^2 = u^2 + 2as$

Forces  $\Sigma F = ma$ 

g = F/m

W = mg

 $\Delta W = F \Delta s$ Work and energy

 $E_{v} = \frac{1}{2}mv^{2}$ 

 $\Delta E_{\rm grav} = mg\Delta h$ 

#### **Materials**

Stokes' law  $F = 6\pi \eta r v$ 

Hooke's law  $F = k\Delta x$ 

 $\rho = m/V$ Density

p = F/APressure

 $E = \sigma/\varepsilon$  where Young modulus

Stress  $\sigma = F/A$ 

Strain  $\varepsilon = \Delta x/x$ 

Elastic strain energy  $E_{\rm el} = \frac{1}{2}F\Delta x$ 

### Unit 2

#### Waves

Wave speed  $v = f\lambda$ 

Refractive index  $_{1}\mu_{2} = \sin i / \sin r = v_{1}/v_{2}$ 

## **Electricity**

Potential difference V = W/Q

Resistance R = V/I

Electrical power, energy and P = VI efficiency  $P = I^2R$ 

 $P = V^2/R$ W = VIt

% efficiency =  $\frac{\text{useful energy output}}{\text{total energy input}} \times 100$ 

% efficiency =  $\frac{\text{useful power output}}{\text{total power input}} \times 100$ 

Resistivity  $R = \rho l/A$ 

Current  $I = \Delta Q/\Delta t$ 

I = nqvA

Resistors in series  $R = R_1 + R_2 + R_3$ 

Resistors in parallel  $\frac{1}{R} = \frac{1}{R_1} + \frac{1}{R_2} + \frac{1}{R_3}$ 

# Quantum physics

Photon model E = hf

Einstein's photoelectric  $hf = \phi + \frac{1}{2}mv_{\text{max}}^2$ 

equation

## Unit 4

#### **Mechanics**

Momentum p = mv

Kinetic energy of a

non-relativistic particle  $E_k = p^2/2m$ 

Motion in a circle  $v = \omega r$ 

 $T=2\pi/\omega$ 

 $F = ma = mv^2/r$ 

 $a = v^2/r$ 

 $a = r\omega^2$ 

## **Fields**

Coulomb's law  $F = kQ_1Q_2/r^2$  where  $k = 1/4\pi\epsilon_0$ 

Electric field E = F/Q

 $E = kQ/r^2$ 

E = V/d

Capacitance C = Q/V

Energy stored in capacitor  $W = \frac{1}{2}QV$ 

Capacitor discharge  $Q = Q_0 e^{-t/RC}$ 

In a magnetic field  $F = BIl \sin \theta$ 

 $F = Bqv \sin \theta$ 

r = p/BQ

Faraday's and Lenz's laws  $\varepsilon = -d(N\phi)/dt$ 

# Particle physics

Mass-energy  $\Delta E = c^2 \Delta m$ 

de Broglie wavelength  $\lambda = h/p$ 

## Unit 5

Energy and matter

Heating  $\Delta E = mc\Delta\theta$ 

Molecular kinetic theory  $\frac{1}{2}m\langle c^2\rangle = \frac{3}{2}kT$ 

Ideal gas equation pV = NkT

Nuclear Physics

Radioactive decay  $dN/dt = -\lambda N$ 

 $\lambda = \ln 2/t_{_{1/2}}$ 

 $N = N_0 e^{-\lambda t}$ 

**Mechanics** 

Simple harmonic motion  $a = -\omega^2 x$ 

 $a = -A\omega^2 \cos \omega t$   $v = -A\omega \sin \omega t$   $x = A \cos \omega t$   $T = 1/f = 2\pi/\omega$ 

Gravitational force  $F = Gm_1m_2/r^2$ 

Observing the universe

Radiant energy flux  $F = L/4\pi d^2$ 

Stefan-Boltzmann law  $L = \sigma T^4 A$ 

 $L = 4\pi r^2 \sigma T^4$ 

Wien's law  $\lambda_{\text{max}} T = 2.898 \times 10^{-3} \text{ m K}$ 

Redshift of electromagnetic

radiation  $z = \Delta \lambda / \lambda \approx \Delta f / f \approx v / c$ 

Cosmological expansion  $v = H_0 d$
