# INTERNATIONAL A-LEVEL PHYSICS

Unit 4 Energy and Energy resources

Tuesday 17 January 2023

07:00 GMT

Time allowed: 2 hours

#### **Materials**

For this paper you must have:

- a Data and Formulae Booklet as a loose insert
- · a ruler with millimetre measurements
- a scientific calculator, which you are expected to use where appropriate
- · a protractor.

#### Instructions

- · Use black ink or black ball-point pen.
- Fill in the boxes at the top of this page.
- Answer all questions.
- You must answer the questions in the spaces provided. Do not write outside the box around each page or on blank pages.
- All working must be shown.
- If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- Do all rough work in this book. Cross through any work you do not want to be marked.

#### Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 80.

| For Exam | iner's Use |
|----------|------------|
| Question | Mark       |
| 1        |            |
| 2        |            |
| 3        |            |
| 4        |            |
| 5        |            |
| 6        |            |
| 7–21     |            |
| TOTAL    |            |

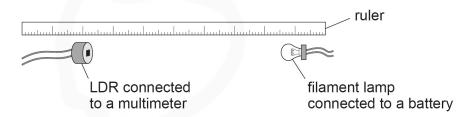

### **Section A**

Answer all questions in this section.

0 1

A student investigates the inverse-square law for light using a small filament lamp and an LDR as shown in **Figure 1**.

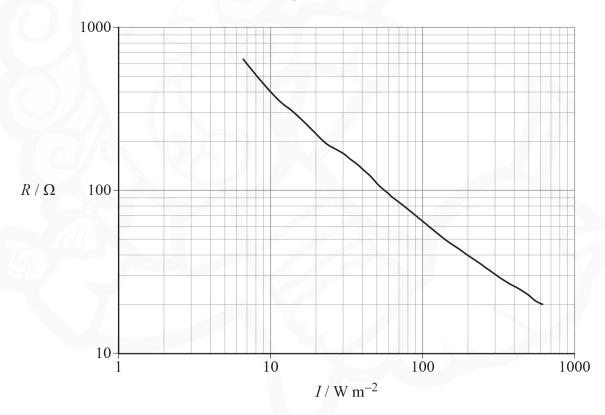

Figure 1

The student varies the distance d between the LDR and the lamp and records the resistance R of the LDR for each distance.

**Figure 2** shows the variation of R with incident light intensity I for the LDR. The student uses **Figure 2** to determine I for each value of R.

Figure 2

**Table 1** shows the results for the investigation. One value for I is shown.

Table 1

| <i>d  </i> cm | $R / \Omega$ | I / W m <sup>-2</sup> |
|---------------|--------------|-----------------------|
| 5.0           | 70           |                       |

|                             |  |                   |
|                             |  |                   |
|                             | angular speed =  | $ m rad~s^{-1}$   |

Question 2 continues on the next page

| 0 2 . 4 | Figure 5 shows wheel X and a uniform disc Y. Y has the same mass and the same diameter as X.       |   |
|---------|--|---|
|         | Figure 5   |   |
|         | wheel X uniform disc Y   |   |
|         |  |   |
|         | <b>X</b> and <b>Y</b> are released from rest and allowed to accelerate down the same ramp.         |   |
|         | Compare the angular acceleration of <b>X</b> with the angular acceleration of <b>Y</b> .  [3 marks | ] |
|         |  | _ |

| 0 3.1 | State and explain <b>one</b> practical problem in achieving fusion in reactors. | [2 marks] |
|-------|---|-----------|
|       |   |           |
|       |   |           |

0 3. 2 The equation below describes a fusion reaction that occurs in the Sun.

$${}^3_2\text{He} + {}^4_2\text{He} \rightarrow {}^7_4\text{Be} + \gamma$$

Table 2 shows the mass of each nuclide.

Table 2

| Nuclide                      | Mass / kg                 |
|------------------------------|---------------------------|
| <sup>3</sup> <sub>2</sub> He | $5.00641 \times 10^{-27}$ |
| <sup>4</sup> <sub>2</sub> Не | $6.64466 \times 10^{-27}$ |
| 7 <sub>4</sub> Be            | $1.16482 \times 10^{-26}$ |

Calculate, in J, the energy released in this reaction.

[3 marks]

energy released = J

Question 3 continues on the next page

0 3. The hydrogen cycle in the Sun involves three fusion reactions:

Do not write outside the box

reaction 2 
$${}^{1}_{1}H + {}^{2}_{1}H \rightarrow {}^{3}_{2}He$$

reaction 3 
$${}^{3}_{2}\text{He} + {}^{3}_{2}\text{He} \rightarrow {}^{4}_{2}\text{He} + {}^{2}_{1}\text{H}$$

The cycle produces one  ${}^4_2\mathrm{He}$  nucleus from four  ${}^1_1\mathrm{H}$  nuclei.

Deduce the number of times that reactions 1 and 2 occur in each cycle.

0 6

Figure 7 shows the flow of gases through a jet engine.

A jet engine has three sections:

- a compressor
- a combustion chamber
- a turbine.

Figure 7

Air enters the compressor at a pressure  $p_1$  and an absolute temperature  $T_1$ .

The compressor rapidly compresses the air to a pressure  $p_2$  and an absolute temperature  $T_2$ .

For this compression,  $p_2 = 40p_1$ .

Assume that the air behaves as an ideal gas.

0 6 . 1

The air enters the compressor with a density  $d_1$  and exits the compressor with an increased density  $d_2$ .

Explain, with reference to the ideal gas equation, why  $\frac{T_2}{T_1}$  < 40 for this increase in density.

[2 marks]

| 0 6.3 | The pressures and temperatures of the air before and after this rapid compression are related by:   |
|       | $\frac{p_1}{p_2} = \left(\frac{T_1}{T_2}\right)^{3.5}$  |
|       | Calculate $T$ when $T = 200 \text{ V}$  |

$$T_2 =$$
 K

Question 6 continues on the next page

Turn over ▶

[3 marks]

In the combustion chamber, fuel is added to the compressed air. The air-fuel mixture burns to increase the gas temperature even more.

0 6 . 4

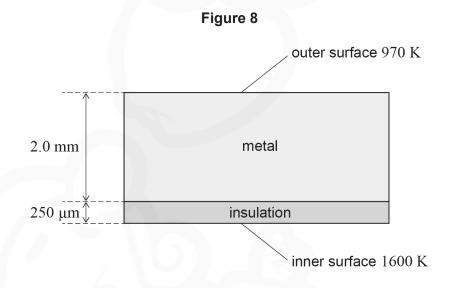

**Figure 8** shows a cross-sectional view of part of the wall of the combustion chamber.

The wall of the combustion chamber is made of a metal and a layer of insulation.

The inner surface of the wall is at a temperature of 1600 K.

The outer surface is at a temperature of 970 K.

The metal has a thickness of  $2.0\ mm$  and the insulation has a thickness of  $250\ \mu m$ .

The rate of energy transfer through the metal is the same as the rate of energy transfer through the insulation.

Determine the temperature at the boundary between the metal and the insulation.

thermal conductivity of metal =  $27~\mathrm{W}~\mathrm{m}^{-1}~\mathrm{K}^{-1}$  thermal conductivity of insulation =  $0.74~\mathrm{W}~\mathrm{m}^{-1}~\mathrm{K}^{-1}$ 

[3 marks]

 $temperature = \hspace{1cm} K$ 

| 0 6 . 5 | The gas from the combustion chamber drives a gas turbine that is rotating                      |    |
|---------|--|----|
|         | at $1.0 \times 10^4$ revolutions per minute. The turbine extracts energy from the gas at a rat | te |
|         | of 10 MW   |    |

Calculate the torque exerted by the gas on the turbine.

[3 marks]

 $torque = N \ m$ 

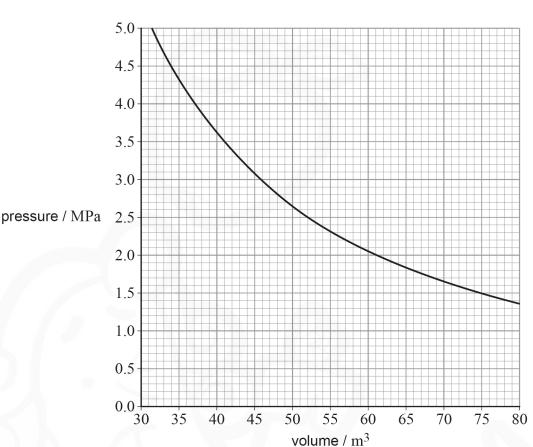

Question 6 continues on the next page

0 6. 6 A fixed mass of gas moves through the turbine.

Figure 9 shows the variation of pressure with volume for this gas.

The gas enters the turbine at 4.3 MPa and leaves at 1.5 MPa.

Determine the work done by the fixed mass of gas on the turbine.

[3 marks]

work done by the gas = J

box

## **Section B**

Each of the questions in this section is followed by four responses, A, B, C and D.

For each question select the best response.

Only **one** answer per question is allowed.

For each question, completely fill in the circle alongside the appropriate answer.

CORRECT METHOD

If you want to change your answer you must cross out your original answer as shown.

If you wish to return to an answer previously crossed out, ring the answer you now wish to select as shown. 🏲

You may do your working in the blank space around each question but this will not be marked. Do not use additional sheets for this working.

A container holds a fixed mass of an ideal gas at a constant pressure. The container has a piston that is free to move horizontally.

Which values of  $\Delta U$  and Q lead to the smallest change in the volume of the gas for this constant pressure?

[1 mark]

|   | $\Delta U/\mathrm{J}$ | <i>Q</i> / J |   |
|---|-----------------------|--------------|---|
| Α | -45                   | -60          | 0 |
| В | -15                   | +60          | 0 |
| С | +30                   | -45          | 0 |
| D | +60                   | +15          | 0 |

0 8 The table shows information about four materials.

| Material | Area / m <sup>2</sup> | Thickness / mm | $U$ -value / W $\mathrm{m}^{-2}~\mathrm{K}^{-1}$ |
|----------|-----------------------|----------------|--|
| Α        | 1.0                   | 40             | 3.0  |
| В        | 2.0                   | 10             | 1.0  |
| С        | 3.0                   | 20             | 2.0  |
| D        | 3.0                   | 30             | 4.0  |

The rate of energy transfer through each material is the same.

Which material will have the greatest temperature difference across its surfaces?

[1 mark]

| Α | 0 |
|---|---|

**0 9** Which of these arises from a theoretical derivation rather than from an experimental observation?

0

[1 mark]

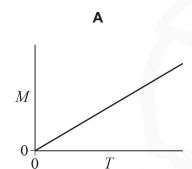

| Δ | Boyle's law |  |
|---|-------------|--|
| A | boyle's law |  |

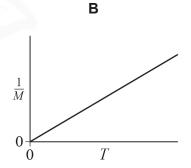

1 0

The mass M of an ideal gas in a container is varied. The volume of the container is constant. For each mass M the temperature T of the gas is adjusted to keep the pressure constant.

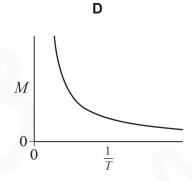

What is the variation of M with T?

[1 mark]

 $\begin{bmatrix} \frac{1}{M} \\ 0 \\ 0 \end{bmatrix}$ 

**A**

**1** The molar mass of methane is  $16 \text{ g mol}^{-1}$ .

How many molecules are in  $820\ kg$  of methane?

[1 mark]

- **A**  $1.2 \times 10^{25}$
- 0
- **B**  $3.1 \times 10^{25}$
- 0
- **C**  $1.2 \times 10^{28}$
- 0
- **D**  $3.1 \times 10^{28}$
- 0
- **1 2** For one sample of an ideal gas,  $c_{\text{rms}} = v$ .

The temperature of the gas is changed at constant volume so that the pressure is halved.

What is the new value of  $c_{\rm rms}$ ?

[1 mark]

- A  $\frac{v}{4}$
- 0
- $\mathbf{B} \frac{v}{2}$
- 0
- c  $\frac{v}{\sqrt{2}}$
- 0
- D  $\sqrt{2}v$
- 0

An insulated beaker of negligible heat capacity contains a liquid at a temperature of  $10\,^{\circ}$ C. The mass of the liquid is  $0.30\,\mathrm{kg}$ .

A metal block of mass 0.10 kg is at a temperature of  $90 \,^{\circ}\text{C}$ .

The metal is placed into the liquid.

The metal and liquid reach thermal equilibrium at a temperature of 28 °C.

The specific heat capacity of the liquid is  $1700 \text{ J kg}^{-1} \text{ K}^{-1}$ .

What is the specific heat capacity of the metal?

[1 mark]

- **A**  $160 \text{ J kg}^{-1} \text{ K}^{-1}$
- **B**  $1300 \text{ J kg}^{-1} \text{ K}^{-1}$
- **C**  $1500 \text{ J kg}^{-1} \text{ K}^{-1}$
- **D**  $1800 \text{ J kg}^{-1} \text{ K}^{-1}$
- Which pair of changes to the conditions of an ideal gas will always increase the internal energy of a fixed mass of the gas?

[1 mark]

|   | Gas pressure | Gas volume |   |
|---|--------------|------------|---|
| A | increase     | increase   | 0 |
| В | increase     | decrease   | 0 |
| С | decrease     | increase   | 0 |
| D | decrease     | decrease   | 0 |

| 1 | 5 | An alpha particle with initial kinetic energy $E$ approaches a stationary nucleus of |
|---|---|--|
|   |   | proton number $Z$ .  |

What is the distance of closest approach between the alpha particle and the nucleus?

[1 mark]

A 
$$\frac{Ze}{\pi \varepsilon_0 E}$$

$$\mathbf{B} \ \frac{Ze}{2\pi\varepsilon_0 E}$$

c 
$$\frac{Ze^2}{2\pi\varepsilon_0 E}$$

$$\mathbf{D} \ \frac{Ze^2}{4\pi\varepsilon_0 E}$$

Why is there a mass defect for a nucleus?

[1 mark]

A Smaller nuclei are always more stable than larger nuclei.

**B** Nucleons have less potential energy in the nucleus than as separate nucleons.

**C** A proton has a smaller mass than a neutron.

**D** There is electrostatic repulsion between protons.

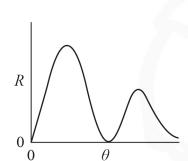

1 7

Electrons are diffracted by nuclei. At a given diffraction angle  $\theta$  the rate at which electrons are detected is R.

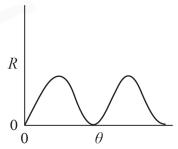

What is the variation of R with  $\theta$ ?
